5. Click on **"More Settings"** then click the **"Outgoing Server"** Tab

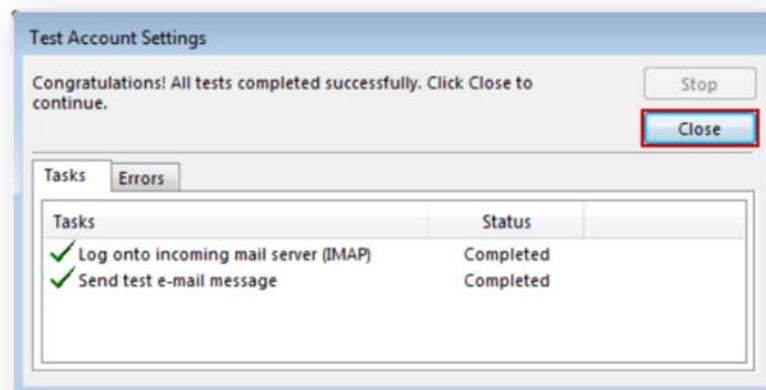

- a. Check the box for **"My outgoing server (SMTP) requires authentication"**.
- b. Check the button for **"Use same settings as my incoming mail server"**.

6. If using "**secure.emailsrvr.com**": Click on the "**Advanced**" Tab
  - a. Change "**Use the following type of encrypted connection**" to "**SSL**".
  - b. Change the port numbers to match the chart on step 4.c. Click "**OK**".

7. Click **"Next"**. Outlook will now attempt to send a test message using the settings we have just put in. If everything was entered correctly, the message will send out successfully.

8. Congratulations! You have now setup Outlook to work with your Mailbox!

Didn't work? Check out these common issues...

- ☐ Authentication failed, Username/Password incorrect  
Check that your username reflects exactly what you see displayed above. For certain mailboxes, the username will be different from your email address. If correct, try re-typing your

password.

☒ Send test e-mail message: Failed

Port 25 is typically blocked by internet service providers (ISPs).  
Try changing the port within your Outbound Email Server settings. Alternative ports are 465, 587, 2525, 8025.

☒ Log onto incoming mail server: Failed

Verify your internet connection is stable. Then double-check that you've typed the "Incoming mail server" address correctly.
